SecureRF Recognized at the 4th Annual Giesecke & Devrient Security Forum

Only U.S. Based Firm Invited

NEW HAVEN, CT, November 6 2011 –SecureRF Corporation, developer of the world’s first linear-based security methods, was named a winner at the 4th annual Giesecke & Devrient Security Forum held this October in Munich, Germany.

The Giesecke and Devrient (G&D) Security Forum brings together 10 to 12 innovative technology companies with representatives from G&D’s different business units to promote strategic investments, cooperation and licensing opportunities. Companies chosen to participate compete to win G&D as a customer, as a partner in the area of R&D, and the opportunity to have G&D market their complimentary solutions or technology. This year, twelve organizations were invited to participate. The two day program included multiple presentations by each company, and culminated in the selection of the top three firms. SecureRF, the only U.S.-based firm asked to participate, was one of the top three companies recognized at the end of the forum.

SecureRF’s team of mathematicians/cryptographers has developed the world’s first linear-based cryptography methods that are small enough and efficient enough to directly address the need for security solutions in resource-constrained devices. SecureRF’s Public and Private Key methods provide strong authentication and data protection solutions for low-resource platforms such as near field communications (NFC), passive and active radio frequency identification (RFID), microcontrollers, machine-to machine (M2M), and integrated circuits (IC). SecureRF is developing solutions that address high value asset tracking, anti-counterfeiting, contactless payment systems, wireless sensor networks, the Smart Grid and Defense/Homeland Security border security systems.

Founded in 1852, G&D is a world leader in currency, security documents, and identification systems. Their products guarantee the authenticity of banknotes and ID documents and secure electronic payments, online transactions, and mobile communication. G&D monitors emerging trends and is now active in everything from NFC to e-Health.

About Giesecke & Devrient

G&D is a global market leader and pioneering innovator in banknote production and processing, security documents, and identification systems. It supplies commercial banks, business enterprises, network operators, and public transportation companies with innovative hardware, comprehensive software and services, and end-to-end solutions for mobile security applications. More information is at <http://www.gi-de.com>.

About SecureRF

SecureRF Corporation provides security solutions for embedded systems and wireless sensor network technologies used in high value asset tracking, monitoring and anti-counterfeiting applications in the pharmaceutical, food, defense, homeland security and other sectors. The company's technology, based on a breakthrough in public-key cryptography that is very computationally efficient yet highly secure, provides strong authentication and data protection solutions for low-resource platforms including NFC, the Smart Grid, RFID and other embedded systems. More information about SecureRF can be found on its Web site at www.SecureRF.com. SecureRF's insights into RFID Security can be found on its blog at www.SecureRF.com/RFID-Security-blog/.
